

To whom it may concern;

Delfi Medical Innovations is a world leader in tourniquet technology, development and evaluation. Members of the Delfi team have been extensively involved in tourniquet development and evaluation for more than 20 years and holds patents for much of the advanced tourniquet technology that is now in widespread use in the United States and elsewhere around the world.

I contacted Lead Generators International (LGI) to generate leads of medical staff in out-patient care centers in the United States. These prospects required a high level of expertise and understanding of medical tourniquet technology. With its experience in medical industry, LGI proved to be a team of dedicated professionals who always go the extra mile for their clients. They impressed me with their meticulous review of the lead generation plan and advice on additional considerations our internal group may have overlooked.

LGI had also put me in touch with external service providers who have helped add value to the overall project. They are well versed in handling conflicts in a diplomatic manner. In the past several years, I have referred LGI to several of my former colleagues and partners. When it comes down to lead generation, Lead Generators International is a first-class organization that will exceed expectations.

While there are numerous lead generation companies that offer similar services, I chose LGI based on their past performances of meticulous pre-campaign preparation and willingness to work with requirements specific to the medical device industry.

I am happy to recommend the services of LGI to any medical or Bio technology company looking to increase sales or validate market demand for their products or services.

Warm regards,

Rossa Sung
